

The screenshot displays a Zoom meeting in progress. At the top, a video bar shows five participants: Gokulaprasad M F, Dinesh S F, Maria Chande Bala-Laza, MADHUMITHA S F, and Mayank Singh - FI. Below the video bar, a toolbar contains icons for various Zoom functions. The main window shows a presentation slide titled "Proposed System" for the "AKSHAYA" project. The slide lists four key features of the system:

- The system ensures secure ambulance operation using biometric fingerprint authentication, allowing only authorized personnel to access the ambulance.
- It enables real-time patient vital monitoring through IoT sensors, ensuring continuous and accurate health tracking.
- AI-based anomaly detection identifies critical health conditions early and sends instant alerts to medical.
- The type of medicines administered, dosage, and time are automatically recorded and shared on the hospital dashboard for better treatment transparency and preparedness.
- GPS and traffic data analysis support optimized ambulance routing, reducing delays and helping prevent loss of the golden hour.
